

Table of Contents

Preface	i	The Navier-Stokes equation	39
		Reynolds' number	40
Review of Newtonian Physics	1	Steady Flow in pipes	40
Linear Momentum	1	Impedance	42
Work and energy	1	Pulsatile flow in arteries	42
Power	2		
Extended bodies	2	Bioenergetics	45
Center of mass	2	Energy input to living organisms	45
Rotation	3	Energy demand of organs	46
Moment of inertia	5	Heating and cooling	47
Applications	8	Appendix—Planck's blackbody radiation law	49
Firearms	8		
Automobile collisions	9	Some ideas from thermodynamics	53
		The First Law of Thermodynamics	53
Dimensional analysis		Equation of state	54
and scaling laws	13	Thermodynamic relations	54
Dimensional analysis	13	Heat engines and Carnot efficiency	56
Surface waves in deep water	14	The Second Law of Thermodynamics	59
Allometric scaling	15	Statistical Mechanics	59
Strength to weight ratio	15	Boyle's Law	59
Structural strength	16	Maxwell-Boltzmann distribution	60
Terminal velocity	17	Applications of Maxwell-Boltzmann	
How high can you jump?	17	distributions	62
Basal metabolism	18	Liquid-vapor equilibrium	62
Lifetimes	19	Reaction rates	62
Brain size	19	Dissolved gases	63
		The bends	64
Musculoskeletal system	23		
Skeletons of land vertebrates	23	Diffusive processes and Brownian motion	65
Muscle	23	Random walk model of diffusion	65
Mechanical (dis)advantage	24	The mean and variance of the position	66
Virtual work	24	Stochastic differential equation	67
Hill's Law	25	Thermal "force" and osmotic pressure	69
Basics of locomotion	26	Brownian motion and diffusion	70
Walking	26	Diffusion across a synapse	70
Scaling arguments	28	How a cell eats	70
Timing	29		
Walking power	30	The properties of water	73
Transition to running	32	Static properties	73
Running power	33	Solvent properties	73
Other considerations	34	Solubility of H ₂ O in H ₂ O	74
Maximum speed	34	Viscosity	74
Animals that cannot run	34	Specific heat	75
		Heat of vaporization	76
Fluid mechanics and		Vapor pressure	77
living organisms	37		
Euler's equation	37		
Conservation of fluid	38		

Excitable cells	79	Mathematical review	127
Electrocardiography	79	Review of Trigonometry	127
Neurons	82	Areas and Volumes	128
Sensory cells	84	Integration	128
Membrane potentials	84	Differentiation	129
Energetics of muscle tissue	85	The fundamental theorem of calculus	130
		Functions of several variables	130
Sound, hearing and the human voice	87	Ordinary differential equations	131
Sound propagation in gases	87	Vectors	134
Hearing and the ear	90	Vector analysis	135
Response to sound	92	Basic ideas of probability theory	137
Frequency response of the ear	93		
Spatial discrimination of sounds	93		
The human voice	95		
The human visual system	99		
Simple lenses	99		
Problems with lenses	101		
Problems with vision	102		
Light → nerve impulses	103		
Vision and the brain	105		
Effects of radiation on living organisms	107		
Background	107		
Effects of penetrating radiations	108		
Passage of radiation through matter	110		
Attenuation of radiation in matter	113		
Radiation exposure and dosage units	114		
Effects of radiation exposure	115		
Appendix	118		
Physics of diagnostic methods	119		
Auscultation	119		
Blood pressure	120		
Ultrasound imaging	121		
Magnetic resonance imaging	122		
X-rays and computerized tomography	125		
Radioactive tracers	126
